

Boggy Creek Animal Hospital

Surgical Procedure Release Form

Today your pet will be undergoing the following surgical procedure(s):

Please read thoroughly the Anesthesia Release Form as it addresses the pre-surgical preparation and describes the vital signs monitoring that we provide throughout the procedure. We will choose the safest and most appropriate medications for your pet.

Upon pick-up we will discuss home care, follow-up visits, and any medications that will need to be given. Do not hesitate to ask us any questions that you may have.

Pain Medication

While we try to eliminate pain from any surgical procedure, your pet may experience some post-operative discomfort. To prevent this, we give injectable pain medication just prior to the surgical procedure. Upon pick-up, we will discuss pain medication to go home and its proper administration. Since not all pets experience post-operative pain to the same degree, we will tailor the medications to your pet's needs.

Laser Surgical Option

We do offer Laser Surgery as an option for treatment. For many procedures the laser can replace the traditional scalpel. The advantage to laser surgery is that there is generally less post-operative pain, less bleeding during surgery, and less swelling associated with the procedure. This option is ideal for many types of surgery; for some it is not. Feel free to ask if you have any questions.

Yes, I would like the doctor to use the laser.

No, I would prefer traditional surgery at this time.

Please sign and date this form. Please leave a telephone number where we can reach you.
